example mat 15 x 20 cm

Examples of use

Printing process:

4 C- Transfer printing process allows you to use complex “sujets” - with this the floor can be used as ideal area for promotion with logomats. Sublimation printing gives high abrasion- and excellent colourfastness.

Anti-slip backing - thin backing - thin backing up to 1.5 mm thickness (even shopping cars can be used on these mats) -
guarantees safety lying on the floor. Excellent transfer printing makes these mats eye catchers.
Direct distribution has positive effects on the advertising budget.
